

Jaewoo Park

AI Agent Engineer / AI Solutions Architect

Designing and shipping AI systems
for real operational constraints.

Seoul, South Korea jwoo9928@gmail.com +1 408 210 9171 linkedin.com/in/jaewoo9928 github.com/jwoo9928 jaewoo-park-ai-portfolio

PROFILE Software engineer with approximately four years of experience across mobile, Web3, web, and AI products. Currently designs and ships agentic AI systems for institutional workflows - owning requirements discovery, solution architecture, full-stack implementation, evaluation, GPU model serving, deployment, and operating handoff.

In use	Reusable AI PoC platform Consulting delivery	Hours → ~5 min Representative internal audit validation Institutional beta underway	8 × A100 40 GB GPU model-serving fleet Plus Blackwell optimization

01 EXPERIENCE

Seoul AI Foundation Oct 2025 - Present
Seoul, South Korea

AI Agent Engineer · AI Solutions Architect

- Independently built **AIOps-PoC**, a reusable Agent Harness that turns institutional requirements into specialist-agent plans, validated execution DAGs, model-serving environments, request-specific Playgrounds, user evaluation, and reporting; adopted by the consulting team after a six-month build.
- Separated agent planning from execution through **RuntimeGraphIntent** → **Graph Intent Compiler** → **ServingPipelineSpec**, with deterministic topology, type, entry-point, model-readiness, and GPU checks plus human approval. Operate vLLM across 8 × A100 40 GB GPUs and RTX PRO 6000 Blackwell for LLM, VLM, OCR, embedding, and ASR workloads.
- Built an **evidence-grounded public-contract pre-audit system** combining versioned regulations, hybrid retrieval, knowledge graphs, proof records, deterministic decision rules, and authenticated human approval. A representative internal review fell from hours to approximately five minutes; institutional beta validation is underway.
- Delivered **AI Shakespeare**, a Windows Electron kiosk that generates a structured one-act play and prints it on an 80 mm thermal receipt, with serialized requests, bounded retries, encrypted secrets, SQLite state, printer integration, and NSIS packaging; on-site installation is scheduled for August 2026.

ICT Global Internship Program Jul 2024 - Sep 2024
Software Development Intern San Jose, California

- Reframed an availability-dependent, inconsistent manual English-writing review process as an LLM-assisted service; designed the submission-to-feedback workflow and shipped the Next.js product.

PILAB Technology, Inc. · BIFROST Nov 2021 - Aug 2023
Mobile Engineer Seoul, South Korea

- Led React Native development for the Biport and Pockie self-custodial multichain wallets; built controllers for multiple mnemonic seed phrases, account and network state, transfers, transaction tracking, and gas-free optimization.
- Integrated Bifrost Cross-Chain Swap into both mobile clients, enabling in-app bridge-and-swap flows across supported networks.

dangamsoft Mar 2021 - Oct 2021
Mobile & Web Developer Seoul, South Korea

Developed and released Gurumirangi, a React Native pet-community application with production API integrations.

02 ADDITIONAL EXPERIENCE

Web Development Teaching Assistant · Chungnam National University · Jun-Nov 2023 **Founding Member** · SOLIF / NAUEM · 2021-2023 · Reading curation and accessibility-community products **1st Cadet** · 42 Seoul · Feb 2020-Mar 2021

03 TECHNICAL SCOPE

Agentic AI	Multi-agent orchestration · LangGraph · DeepAgents · typed intent · graph compilation · human-in-the-loop · evaluation
AI Systems	vLLM · A100 / Blackwell · multimodal pipelines · hybrid retrieval · knowledge graphs · reranking · model readiness
Engineering	Python · FastAPI · TypeScript · Next.js · Electron · PostgreSQL · Neo4j · Qdrant · SQLite · Docker · React Native

04 EDUCATION

Chungnam National University Division of Computer Convergence · 2019-2025
